Zero Leak Technology

I-fittings are the safest valve and fittings products in the instrumentation and control markets. We are so confident in the Superlok, Zero Leak Technology, that we back all i-Fitting products with a lifetime guarantee against leaks or failures!

SUPERLOK[®] i-Fittings and valves have a revolutionary, leak-free design that takes the guess work out of installing tube end fittings and valves. Installers have experienced far too many leaks due to improper tightening procedures. Over tightening and under tightening the compression nut is the biggest cause of failures. To eliminate this problem, Superlok has a built-in gap gauge installed on every fitting. Now, an installer can simply tighten a fitting until the patented, built-in gap gauge pops off... for a perfect connection every time!
